## SRU Refractory Maintenance

**Description:** JTT was awarded work to repair refractory in two SRU units in this refinery. The scope included work in the transfer lines, sulfur pits, and Reaction Furnace Burner Walls of two Sulfur Recovery Units.

**Highlight:** When the work scope tripled in each SRU and schedule was decreased by three weeks, JTT was able to quickly use its resources and manpower to accommodate the needs of the customer. All work was completed successfully and in accordance with the shortened schedule.
