Sugar Plant New Vertical Lime Kiln

Description: JTT managed the manpower, site coordination, schedule, and cost for the refractory installation on this large capital project. For this project, JTT installed a six component brick lining in a new vertical lime kiln.

Highlight: In order to install the brick, we needed to install a construction elevator and utilize two internal hoists. There was only one entry point 80 feet from the top of the lining and 80 feet from grade. This project finished a month ahead of schedule.
